I'm a proud user of FireFox 1.5

Firefox 1.5 came out today, and I didn't think it twice before upgrading. I use plenty of extensions and most of the ones I had worked.

Two of the ones didn't work are: Roboform, and Live HTTP headers.

I downloaded the latest Roboform extension from http://www.roboform.com/browsers.html and it got it working immediately.

Live HTTP headers is a must and I use it everyday. I also found the latest extension at http://livehttpheaders.mozdev.org/ but site is acting extremely slow and I haven't been able to download it.
