'application/x-shockwave-flash'

Adobe Flash is getting more and more popular as the platform to develop multi-touch applications on.

Check out a post at <http://www.multitouch.nl/?p=216> regarding a Summit that will be organized between [Natural User Interface](#) and [Adobe](#) in 2009 with the main focus on development of multi-touch solutions on Adobe's Flash platform.

In case you haven't seen my post on our NUI Group community website regarding that event, please have a look here: <http://nuigroup.com/forums/viewthread/3582/>

This video was made as a proof of concept of Flash applications running on the tracker of [NUI Suite Snowflake](#).
