Related Categories: Adobe, AIR / Apollo, Software

Following the release of Adobe AIR, [ichameleon/group/](#), has been working with Adobe and the New York Times on a small AIR demonstration app called ShifD: an awesome little app that helps you organize your notes and see them online, your mobile phone, iphone app, or the AIR based desktop app. The Adobe Air app was written entirely in AJAX using [jQuery](#) and a custom made MVC framework, wrapped around the Adobe AIR shell. You can sign up for an account at <http://www.shifd.com> and/or download free tools at <http://www.shifd.com/tools/>.

Important: You must use jquery 1.2.3+ with AIR 1.0. Previous versions have application sandbox issues.

This launched along with Adobe AIR, which will allow us to take our html/flash/flex applications to the desktop. In fact, Adobe announced that Adobe AIR, Flex Builder 3, and the Flex 3 SDK are now live on their website.
